

3P Leaf Separator

Item #2000220 Gray
Item #2000210 Brown

This Small Filter is placed in the downspout to remove particles and debris from water collected from roof tops. If you have a home with many trees and leaves, you should select a 3P Leaf Separator. It sorts out leaves and larger dirt particles, and ejects them from the water supply. The green lid can be shut in winter conditions. The unit is also ideal in larger Rainwater Harvesting Systems, or for filling ponds. Advantage: No more blocked rainwater gutters and downspouts. Accumulating leaves and particles are continuously filtered out. Install between DN 80 and DN 100 pipes, adapters included. Complete with reduction sets.

Works well as a pre-filter for a rainwater harvest tank

Accepts high volume of water flow

Perfect for outdoor water use, the larger dirt is filtered out of the rainwater by the filter ribs

Compact filter for use when there is little room to work with

Dimensions:

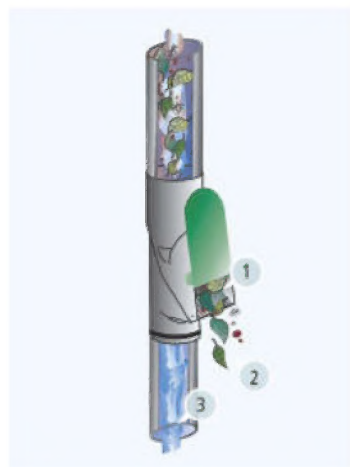

H:12.99

W:8.5

D:9.64

Weight:1.5

How it works

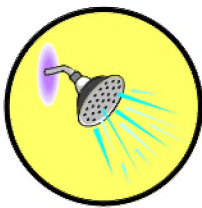

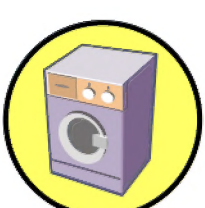

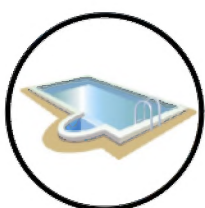

1. The larger dirt is filtered out of the rainwater by the filter ribs.

2. Leaves and dirt are simply ejected from the filter.

3. Cleaned rainwater passes through the downpipe.
